

Gyration® Introduces Air Mouse® Voice

New Air Mouse Controls Presentation Effects with Just Your Voice

Camarillo, California, November 1st, 2016 — [Gyration](#), owned by [SMK-Link Electronics](#) (a division of [SMK Electronics Corporation U.S.A.](#)), is pleased to introduce Air Mouse Voice—a complete solution for controlling your computer from anywhere in the room. Connecting via Bluetooth® 4.0 LE, the new Air Mouse is a voice-enabled presentation remote control, motion-sensitive handheld mouse, and high-precision desktop mouse—all in one.

With a wireless range of up to 70 feet (21-meters), Air Mouse Voice requires no software for normal desktop or in-air operation. Gyration includes its newly-designed MotionTools® Software to provide voice command capability, mouse button customization, and a large library of screen tools and effects.

“Interactivity has become the most important aspect of controlling your computer,” said John Blair, General Manager of Branded Products for SMK-Link Electronics. “Air Mouse Voice uses next generation Gyration technology to unlock the capabilities of today’s software and hardware. Like any mouse, it provides precise cursor control on the desktop. But unlike traditional mice, it can be picked up, used in the air, and even spoken to: providing tools and effects triggered just with your voice. Utilizing Bluetooth 4.0 LE wireless to conserve battery life, Air Mouse Voice provides complete control of your computer from anywhere in the room.

“Gyration’s MotionTools Software has always supported user customization of Air Mouse buttons, but Version 3.0 with Air Mouse Voice takes this to a whole new level— providing instant voice access to a large library of screen tools and effects,” continued Mr. Blair. “Need to access the Internet during a presentation? Press the microphone key and say, ‘Web Browser,’ to pop up your default browser. Have a screen with details too small to read? Just press the key and say ‘Zoom In’ to enlarge your content. Need to enter text? Say ‘Keyboard’ to call up an on-screen keyboard. With Air Mouse Voice, an entire library of screen tools and effects can now be accessed instantly, without having to configure and remember button assignments in advance.”

Gyration's New Air Mouse Voice (*Media Points*)

All new from Gyration, Air Mouse Voice is a motion-sensitive 'gyroscopic' 'in-air' mouse, high-precision desktop mouse, and voice-activated screen effects remote control—all in one. Connecting via Bluetooth 4.0 LE, Air Mouse Voice delivers a wireless range of 70 feet, and is both Windows and OS X compatible.
